Le préfiltre garantit un meilleur fonctionnement de tout compresseur installé dans un environnement poussiéreux. Le filtre est équipé de 2 cartouches pour une meilleure sécurité de filtration.

Un séparateur cyclonique évite que les particules plus grosses n'encrassent prématurément le filtre.

Chaque préfiltre est fourni avec 3 mètres de gaine souple pour le raccordement à l'aspiration du compresseur

Minimum Pressure Valve

OPERATION: The Minimum Pressure Valve which is installed after the oil separator, has two functions:

- during start-up, the valve remains closed until the opening set-up pressure. Then it opens in order to maintain minimum pressure in the air-oil separator. In this way, pressure can lubricate the compressor unit;
- during shutdown, the check valve is closed to prevent backflow from the line through the compressor.

INSTALLATION: The Minimum Pressure Valve is installed at the discharge port of the separator. It can be threaded or flanged.

REPLACEMENT: It depends on compressor applications and working conditions. Valve inspection and its replacement is recommended 8.000 running hours. VMC original spare parts have to be used.

Schéma de principe d'un sécheur air comprimé à détente directe

Compresseur frigorifique: comprime le gaz réfrigérant pour réaliser le cycle de refroidissement	1
Pressostat de contrôle	2
Condenseur réfrigérant: évacue la chaleur absorbée par le circuit réfrigérant	3
Filtre déshydrateur: élimine l'humidité du circuit réfrigérant	4
Electrovanne: pour le contrôle du gaz réfrigérant lorsque le sécheur est éteint	5
Voyant: indique la circulation du réfrigérant	6
Tube capillaire: dispositif de détente pour réduire la pression et la température du réfrigérant	7
Echangeur de chaleur: pour le refroidissement de l'air comprimé et la séparation des condensats	8
Senseur de niveau: commande le dispositif de purge des condensats	9
Electrovanne de vidange: contrôlé par le panneau de commande, elle évacue les condensats	10

NB. Le schéma peut différer légèrement selon le modèle du sécheur.

Option EMS = Economiseur d'énergie par gestion du sécheur avec sonde point de rosée

E.M.S.

Le sécheur est équipée d'un capteur de point de rosée de haute précision connecté au contrôleur numérique.
L'EMS régle le fonctionnement du sécheur en fonction de la température du point de rosée de l'air de sortie mesurée par le capteur.
Le retour sur investissement de l'option EMS peut être inférieur à 1 an, réduisant ainsi le coût total.
